

Welcome to Paperwork!

They are going to drive you crazy. Your phone operator, your bank, your girl's school, your dog's veterinary, even your Internet provider, it seems like all of them are trying to drown you under tons of papers. Papers you have to read, classify and memorize just in case you may need it later. Most of the time, you won't, which means you waste your energy for nothing.

Paperwork will help you to get rid of all those papers by turning them into searchable documents. It's simple: just scan and forget. Looking for a specific paper? Just type in a few keywords and tada!

1 Documents and pages

Paperwork's interface is composed of two panels. On the left (green), the list of all your documents sorted by the date they were imported. On the right (blue), the pages of the currently selected paper.

You can add papers from several sources, depending on the devices connected to your computer: scanner flatbed, scanner feeder, camera, ... You have no scanner at home? You can still use the scanner you have at work. Paperwork will easily import PDF and image files.

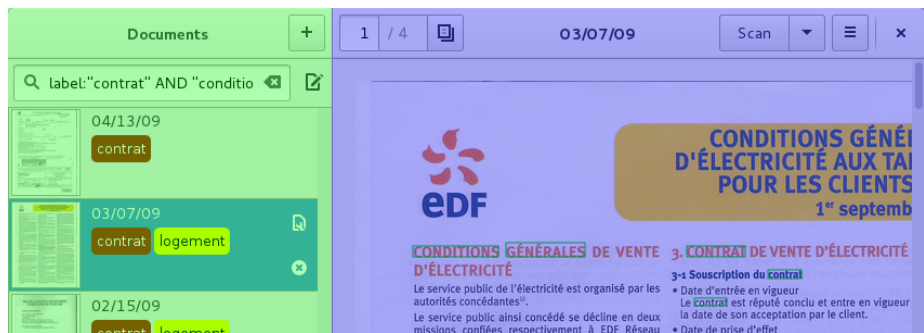

Figure 1: Main window

2 Find

Find what you need, when you need it. Type a few keywords in the search bar and the list of papers will reduce to keep only the matching content. This is where the magic happens: Paperwork uses optical character recognition (OCR) to convert your papers into simple text files, so it's easy to search for text.

Figure 2: Search field

3 Export

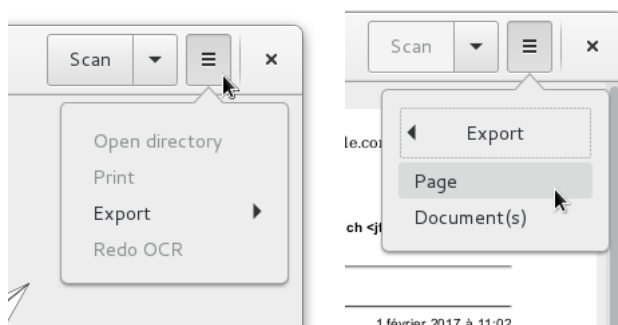

Figure 3: Export menu

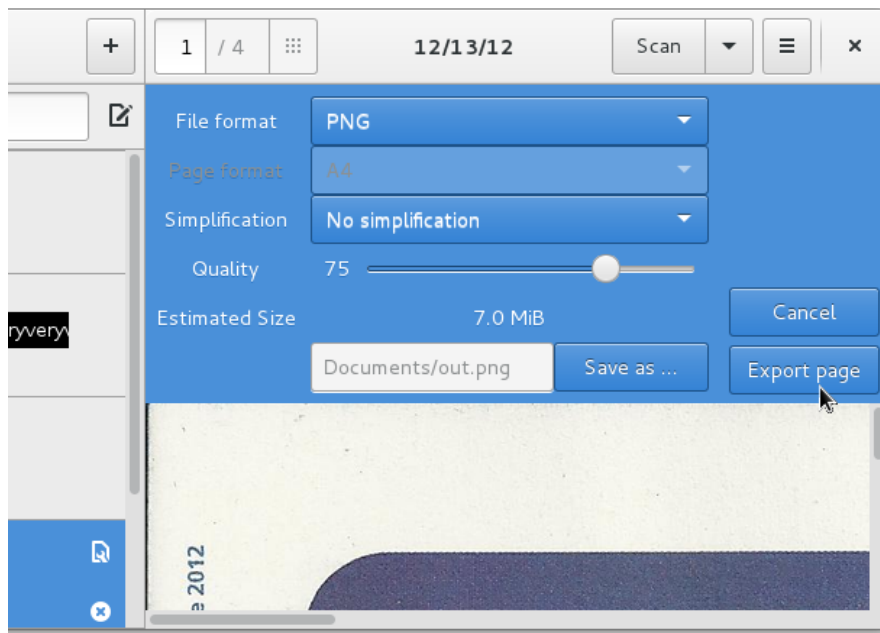

Figure 4: Export settings

Sometimes you may want to export a document to send it to someone else. Multiple formats are supported: .pdf, .jpg, .txt, ... And of course, paper (requires a printer, sold separately).

4 Labels and additional keywords

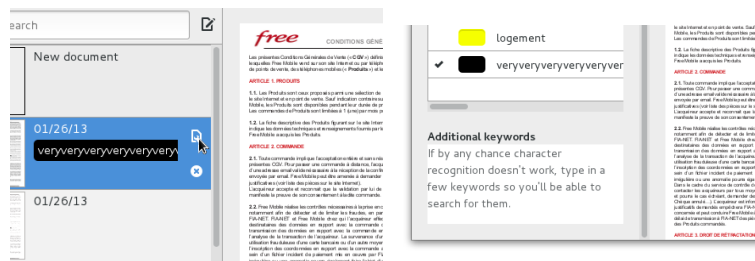

Figure 5: Labels and memos

You answered an important email and want to keep track of it? The paper you scanned was so unreadable that Paperwork failed to recognize some important keywords? Join additional keywords to your paper so you won't miss anything! All the keywords you add will be searchable, as if they were directly written on the paper you scanned.

You would like to sort a little bit your documents ? You can also add labels on your documents. Each label has its own color. With time, Paperwork will learn which labels go on which documents and it will automatically apply them on new documents¹.

5 Your first documents

Figure 6: New document, scan and import

Click the + button, the scan button, and that's all folks! You are now aware of the main features of Paperwork. You can start using it by adding your first own paper.

6 Need more help ?

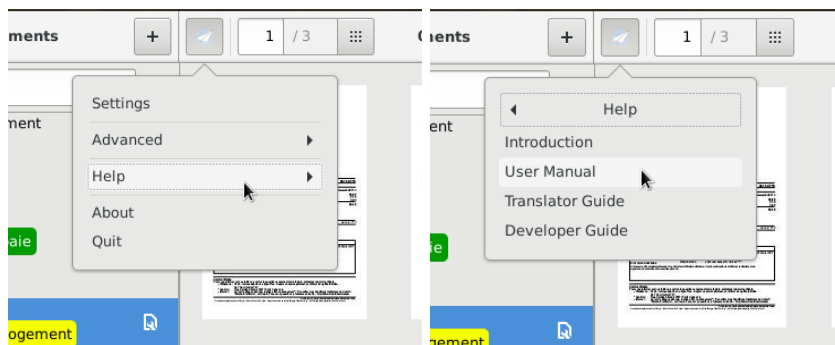

Figure 7: Paperwork user manual

¹Automatic label application uses the text in the documents. This feature won't work if there is no text in the document (photos, etc)

If you need more help, there is a more complete manual integrated in Paperwork.

We hope that you'll enjoy this piece of software. If you like it, please tell us, and if you don't, please tell us why!
